

The Brno Project

Case Study Seaborne Plastics s.r.o

Seaborne Plastics is one of the leading thermoforming companies in Europe, respected throughout the industry and beyond for the **quality** of work and commitment to customer service.

Formed in 1979 the company continues to thrive in a competitive market by providing a service based on original idea, which was to apply sound engineering principles to every aspect of our production at the same time as investing in the best people, technology and standards.

Continued growth is testimony to our success

Martin Bollands – Managing Director explains “Recent expansion of production into the Czech Republic has enhanced the quality of the service we provide and regardless of which plant you deal with you can be assured of the same quality and attention to detail that has made Seaborne Plastics an acknowledged industry leader.

Understanding that their customers face the same challenges as themselves, servicing an increasingly demanding market place with little or no margin for error. Understanding the cost implications of a missed deadline or inefficient production, but most of all they understand the requirement to get it **right first time, on time, every time.**

Thirty years of experience in plastic thermoforming has taught the company many things but perhaps the most important is that they cannot afford to stand still because clients certainly will not.

Business Flow UK Ltd has assisted the company in the transition and the implementation and development of their integrated business system over the past few years and in the development of systems integration with the implementation of JobBOSS Enterprise system in the new Brno facility. The commitment on their part has helped considerably in the transition to the new Brno facility and business **process improvements and efficiency.**

ISOQUEST has assisted the company in gaining its certification to ISO 9001 and ISO 14001, with the commitment to setting high standards in every aspect of its operation. Seaborne believe that in order to exceed the demands and expectations of their customers they must strive for excellence in every department and invest heavily in the training and constant monitoring of their entire workforce.

Seaborne produced components grace Harrier jets, Virgin trains and some of the worlds best known high performance cars as well as equipment used in hospitals around the World. Our work in architectural lighting is considered the finest of its type and we continue to produce exceptional results with an engineer's eye for detail.

“Anything that can be produced from a flat sheet via a thermoforming process, Seaborne can do it”

The success of any business can be measured by the ability to meet the challenges set by its customers. Here at Seaborne Plastics we have responded to the changing face of manufacturing by investing in the finest machinery, the latest technology and of the course the very best workforce.
